Yushin

Create a simple application that will fetch a list of books from an api endpoint and display them in a list. When a user selects a book they will be shown a second screen that will display a more detailed view of the book data.

Specification

- Consume the following API: https://training.xcelvations.com/data/books.json
- Display data in a sorted list by alphabets
- Users are able to search book by book name. You can use search bar on book list view controller.
- Open a detailed view when user selects a list item

What is valued

- User decodable model
- Best practice design patterns (MVVM)
- Clean Code
- RXSwift/ SwiftUI (Whatever you like)

Duration

Try not to spend more than 12 hours on this.
